DESCRIPTION

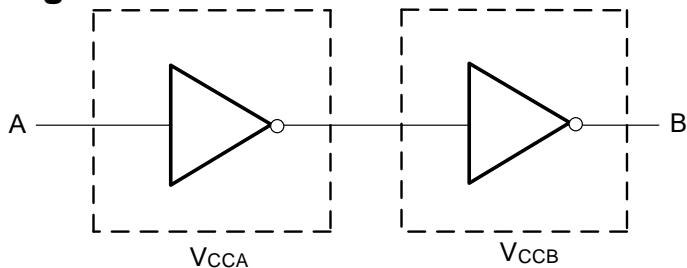

The RS1T34 is 1-bit non-inverting bus transceiver uses two separate configurable power supply rails. The A port is designed to track V_{CCA} , which supporting operating voltages from 1.65V to 5.5V, and the B port supporting operating voltages from 1.65V to 5.5V while it tracks the V_{CCB} supply. This allows for universal low-voltage Unidirectional translation between any of the 1.8V, 2.5V, 3.3V and 5V voltage nodes.

The RS1T34 is designed for asynchronous communication between two data buses. The A bus is input side, the B bus is output side.

The RS1T34 is fully specified for partial power-down applications using I_{off} . The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

The RS1T34 is available in Green SOT23-5 and SC70-5 packages. It operates over an ambient temperature range of -40°C to +125°C.
